

# Microsoft Azure

## MINI-CASE STUDY

**MICROSOFT AZURE ISV:**  
Modus Consulting srl

**WEB SITE:** [www.masterdoc.it](http://www.masterdoc.it)

**SEDE:** Milano, Italia

**DIMENSION:** 7

### **PROFILE ISV MICROSOFT AZURE:**

Modus Consulting has developed in MasterDoc an innovative methodology to help General Practitioners organize the information about their patients, their health problems and the related treatments. This approach is vastly improving the collaboration between physicians working together to the final benefit of their patients.

# Cloud based MasterDoc facilitates physicians collaboration while providing data security

**“Data security and privacy are a key requirement for applications dealing with health data. Microsoft Azure supports Italian and European privacy rules and is compliant to the most important international security standards – Donato de Philippis , AD, Modus Consulting**

## ▪ SITUATION

Health related applications must comply to strong security requirements: high availability, minimum risk of data loss or corruption, strict privacy rules. But at same time must support sharing of data between doctors and with health staff, possibly in different locations: the above requires tools and skills that most doctors do not have.

## ▪ SOLUTION

Using an application running on Microsoft Azure removes most of the security concerns: high availability is provided by the redundancy of systems and data centers, systems are managed complying to the privacy rules set by the EU including the Italian rules, the infrastructure is certified to all the important security international standard. And if something goes wrong, SQL Azure allows getting back the data at any moment of the last couple of weeks.

## ▪ BENEFITS

Availability always and everywhere: MasterDoc is permanently supporting physicians in their job. Patients data are safe and incorruptible thanks to Microsoft Azure security.
